Northbank branch purchasing

New client request | Northbank Services (fictional) | Proposed work, not project history

Fictional demonstration material. All organizations, people, events, and results are invented.

Why we need a tool

Northbank Services operates three branches. Staff currently send purchase requests in email and cannot consistently tell which version a manager approved. We want a mobile-friendly browser tool for a four-week pilot. A requester should enter line items, quantities, unit prices in VND, and a reason, then see a clear review status. This request describes work we want built; it is not evidence that Threadline Delivery has already delivered it.

Approval rules for the pilot

Every submitted purchase request needs approval from its assigned branch manager. A request whose tax-inclusive total is VND 10,000,000 or more also needs finance approval after manager approval. Below VND 10,000,000, manager approval is sufficient. The server must calculate the total from line items. The requester cannot approve their own request, and a finance-stage decision must be made by someone other than the manager who approved it.

Both decisions must apply to the same request revision. Changing line items, quantities, prices, or tax after submission invalidates earlier approvals and restarts manager review. A rejected request must clearly show its rejection and reason. Approval authorizes the request only; it does not mean an order was placed, goods arrived, or payment was made.

Northbank branch purchasing / Review notes

Mobile use and record access

Branch staff sometimes lose connectivity just after pressing Send. Retrying the same submission must not create duplicate purchase requests. The tool should explain whether a request was recorded, still needs sending, or failed. The pilot does not require a full offline drafting and synchronization system.

Requesters and branch managers should see only the requests permitted by their current branch assignments. Explicitly assigned central finance reviewers may review requests across the three branches. Copying a link or changing a branch identifier must not grant access. Northbank will provide the employee identity through existing sign-in, but responsibility for maintaining assignments still needs agreement.

History, export, and open questions

For submission, edits, approvals, and rejection, retain who acted, when the server recorded the action, which request revision was involved, and the state change. Authorized reviewers need an export with an explicit scope and time range. Corrections should not erase earlier events. We have not chosen a retention duration or established any formal compliance standard.

Please propose a small pilot plan, show which previous work informs it, explain what changes for these approval rules, and identify missing decisions. We have not agreed delegated approval, peak traffic, supplier onboarding, or integration with an accounting system. Do not assume those features are part of the pilot.
