Branch Inventory Request Portal

Delivery review | Hillcrest Distribution | March 2026 | Delivered branch-scoped pilot

Fictional demonstration material. All organizations, people, events, and results are invented.

Recorded status and result

The two-branch acceptance checks rejected unauthorized cross-branch reads and writes while allowing an explicitly assigned central reviewer to inspect both branches.

What happened during delivery

The team found that an early detail endpoint checked sign-in but did not check the request's branch. The endpoint was corrected before pilot acceptance and tested independently of the list screen. The delivery review records the defect to make clear why a filtered interface was not an adequate permission boundary.

Checks and their scope

Controlled checks covered direct-link access, a forged branch identifier, cross-branch editing, an inactive assignment, and an explicitly authorized central reviewer. The tested requester could not read or modify another branch's request. The checks used two fictional branches and test identities; they did not establish organization-wide identity governance or validate integration with a real directory.

Branch Inventory Request Portal / Review notes

Delivery review | Hillcrest Distribution | March 2026 | Delivered branch-scoped pilot

Fictional demonstration material. All organizations, people, events, and results are invented.

Lesson retained by the team

Check the actor's current assignment against the record's stored branch on every server read and write. A filtered list does not establish authorization.

Missing evidence and exclusions

Automatic directory synchronization, staff-transfer policy, purchasing authority, and real stock movement were outside the pilot's evidence.

Handover and reuse boundary

The handover included an authorization matrix, endpoint checks, and examples of denied direct access. These are patterns and test cases rather than a complete identity integration. A future project must decide who assigns branch managers and finance reviewers, how assignments expire, and whether central staff may approve or only inspect records.

Reading this result

This review describes a fictional project record. A limited acceptance check is not proof of future reliability or a measured business benefit. A proposal is not a delivered feature. Where the review states that work was paused, excluded, or unmeasured, that boundary remains part of the record.
